Leverage the rich and mature Spring 5 Framework to quickly build and deploy production-ready microservices within the Java and JVM ecosystem

Key Features

Explore the Spring Framework by building three real-world projects

Master efficient application development with proxy and singleton patterns

Use Docker and Apache Mesos to build successful microservices

Book Description

When it comes to developing applications for the web or enterprises, the Spring Framework has become one of the most popular choices among Java developers. With an array of tools and features, Spring offers developers experience that is rivaled by none.

Spring 5: End-to-End Programming is all about leveraging these features and developing your own business applications with hands-on examples. You will create applications of increasing complexity, such as a CMS app, a messaging app, and a real-world microservice. While developing these applications, you will learn about Project Reactor in Spring, Spring Webflux, Spring Data, and Angular. You will also develop these applications using standard design patterns in Spring, helping you to solve common design problems with ease.

By the end of this Learning Path, you will be well equipped to develop enterprise applications on the web using Spring 5.

This Learning Path includes content from the following Packt products:

Spring 5.0 By Example by Claudio Eduardo de Oliveira

Spring 5 Design Patterns by Dinesh Rajput

Spring 5.0 Microservices by Rajesh R V

What you will learn

Implement REST APIs with Spring REST support

Introduce Reactive Programming and use this with Spring Webflux

Develop applications using dependency injection patterns

Learn best practices to design enterprise applications

Build web applications using traditional Spring MVC patterns

Implement caching to improve application performance

Handle logging and monitoring microservices

Manage internet-scale microservices using Docker, Mesos, and Marathon

Who this book is for

If you're a developer starting out with Spring, then this learning path will help you understand new Spring 5.0 framework concepts followed by their implementation in Java and Kotlin. If you are an experienced Spring developer, then this Learning Path will enable you to gain insight into the new Spring 5.0 features.
